

Safety Shrouds and Whip Hoses

Applications/Features:

Operator safety is the first consideration when waterblasting, the 1000 Bar Safety Shroud is designed specifically for use with hand held control guns. These safety shrouds protect the operator from dangerous hose failures occurring near the gun. One should NEVER connect an unshrouded hose directly to a waterblasting gun. ALWAYS connect a whip hose and safety shroud to the gun first, then connect the appropriate hose to the other end of the shroud/whip hose with a quick coupling. The 1000 Bar Safety Shroud features a nitrile outer cover which is water, oil and soil resistant. The inner material consists of high strength braided stainless steel. The 1000 bar shrouds also include a layer of woven Kevlar™ for superior strength.
